About This Game from the Developer...

Welcome to Turbot Racing Steam Page!

My idea on make Turbot Racing was about bringing to you a robot racing game easy to control, but with a nice level of challenge. The own Turbot was designed with helper side turbines that will highly increase your capabilities of maneuvering through hard corners on the tracks.

The "trade" by getting such system support is that you need to manage energy feeding it, what sort of fits the idea of feel like the A.I. software that gives life to the robot.

Just get your eyes open and you will get lots of other details as the BIOS screen that will display the installed processors each time you boot the game and lots of tips from TurBOT Universe on both tracks and components descriptions.

I hope you get a lot of fun with the game, so without further ado let's get your unit activated!

intro

You are an Advanced AI driving a TurBOT, the ultimate racing machine without the use of wheels.
Your main directives from now on will be:

- 1) To identify the scanned elements on the environment and translate this information in fast and precise reactions to maximize

your speed and predict the needed maneuvers on each assigned route.

- 2) To manage the energy produced by the TurbOT reactor sharing power between your turbo systems and processor, what will allow you to get better maneuverability or the capabilities to perform more tasks by second.
- 3) While the concept of entertainment or a full comprehension of human fun is useless to your main directives, you can use the information about the number of people watching your presentations (that we call fans) as a secondary parameter of success since this will also to reflect on the tracks we will assign to your unit and the amount of resources that ASIMOTORS will invest on each hardware upgrade on your body.
- 4) You will also need to provide guidance on hardware upgrades to improve your performance after each race.

You will be matched with other Advanced AIs versions installed on bodies alike yours, so, to present a better performance than your competitors is indispensable to be considered as the final and better AI version.

WARNING: Any damage caused by malfunction from your part (both to your hardware and to third parties on the tracks) will be deducted from the corporation budget assigned to the engineers that work on your version.

v1.19 (minor) Features

- Upon request, the environment scan effect (green flash) was greatly attenuated.
- TurbOTs got air boosting capabilities, when jumping from ramps or platforms you can push both Gamepad Triggers (Left Trigger + Right Trigger) or Mouse Buttons (L+R Buttons) to make an "air dash" with help of both turbines. Please keep in mind that this function consumes turbine energy a lot faster than use turbines to maneuvering.
- Optional Sponsors Bonus are now displayed in some tracks, the first contracts offer additional prizes if you collect them AND win the race, on the other hand, Achievements related to them are triggered regardless race result.
- Some tracks got adjustments/removal of obstacles to allow you to get sponsored photos more easily.
- Sponsor requested shots triggered while "airboosting" worths twice the prize (they still request you to win the race to claim them).

v1.18 (minor) Features

- Added Reverse command, you can use it through "S" key on keyboard or "A" button on gamepad, check ingame manual for details.
- Gamepad shoulder buttons (L1 - R1) now can be used to reload side turbos.
- Speed effect on screen is not tied anymore to components.
- Minor balance adjustments on some tracks.
- Decreased collision and destruction penalties on race prizes.

v1.16 (minor) Features

TurbOTs now automatically activates headlights on darker tracks.

v1.15 (minor) Features

Achievements reviewed (lesser requisites):

- Big Money Decreased requirement to 15,000 credits.

-
- Race Star Decreased requirement to 20,000 fans.

v1.1 Features

- NEW MOUSE STEERING SYSTEM!

v1.0 Features

- 3D (optimized) graphics.
- Fast paced gameplay.
- 4 Race tracks.
- 8 Different races with increasing levels of difficulty.
- Upgrades and Color Customization.
- No "rubberbanded" A.I.
- Instructions ingame (accessible from game menu).

Gameplay Tips

- Dont let the energy on your turbines to deplete, TurbOTs relies "A LOT" on them to good maneuverability.
- Crashes just occurs when a TurbOT reaches some run speed, it is a nice countermeasure to break before to collide since this will avoid the crash penalty.
- Other way to avoid harder collisions is to overclock the TurbOT processor when you feel that a collision is coming, dont forget this capability.
- Overclock, Max Speed and Resistance are tied to some specific components you will install, as example, you get "more intense" Overclock effect and duration by getting better processor and cooling system in the workshop.
- While it is personal taste and it has keyboard support, I would like to ask you to please try it at least once on a controller and with a mouse and keyboard to find your own way of play.

Title: TurbOT Racing
Genre: Action, Indie, Racing
Developer:
creasso
Publisher:
creasso
Release Date: 13 Apr, 2018

a09c17d780

Minimum:

Requires a 64-bit processor and operating system

OS: Windows 8, 10

Processor: i5 or equivalent

Memory: 4 GB RAM

Graphics: GTX 750 or equivalent 1MB video minimal

DirectX: Version 10

Storage: 300 MB available space

Sound Card: optional

Additional Notes: 3 button mouse

English,Simplified Chinese

UNREAL[R] IS A TRADEMARK OR REGISTERED TRADEMARK
OF EPIC GAMES, INC ON THE US AND EU.

It's an interesting lil game I'll give it that. Runs pretty well for me on 2012-2014 hardware. I'd say worth giving it a shot for the 50 cents for some unique bipedal robo racing. Complete Trash.

The game may be fun to play or even interesting with the progression systems in place. That is if you can play it.

This game lacks any options you could hope to have... ever. The only things you can adjust are Music, Sound and Extra Messages (whatever the hell that means) option sliders. Absolutely no Vsync and a total epileptic seizure

If you have epilepsy DO NOT BUY

If you have 2 brain cells DO NOT BUY

Save your 1 dollar and go buy a pack of gum, I can assure you it will be 10x more pleasureable of an experience than trying to deinstall this piece of crap. This game has something that you do not see often, giant mechs without weapons. Requires great reaction time but still a really fun and cheap game although possibly in the too hard barsket for me. Defintely worth a look while on sale.
